

Endorse the baseline — not deployment

Endorse the evidence-backed architecture and coding baseline as the controlled reference, with a gated roadmap for owner evidence and future validation — not deployment approval.

Claims: P6-C001 · P6-C002 · P6-C003

Decision requested

Endorse the approved baseline and controlled next-step roadmap. Do not authorise Azure activity.

Evidence chain

Approved requirements, target architecture, Azure design, delivery plan and Phase 5 package.

Current status

Locally implemented and statically validated; no target or runtime evidence.

Hard boundary

Three authority conflicts, fourteen owner controls and two retained minor gaps remain open and unwaived.

Context

A bounded transformation with retained human authority

Release 1 focuses on the first 20 eligible opportunities and a controlled evidence-to-draft journey.

Claims: P6-C004 · P6-C005 · P6-C006

12 → ≤3 weeks

Approved median cycle-time target within 12 months — not achieved evidence.

20 opportunities

First eligible new opportunities with deal and jurisdiction evidence.

Deal professionals

Validate material outputs and own the case journey.

Legal & Compliance

Review specialist conclusions and governed use.

Internal Audit

Issues the independent validation verdict.

Investment Committee

Retains every investment decision.

Value logic

Speed through governed reuse — quality through explicit control

The architecture supports a measurable value hypothesis without asserting ROI or realised benefit.

Claims: P6-C007 · P6-C008 · P6-C009

Governed sources

→

Grounded assistive analysis

→

Human review

→

Committee-ready draft

Cycle-time target

12 weeks to no more than 3 weeks is the approved target — not a realised result.

Evidence quality

Provenance, citation and quality gates bind material claims to governed evidence.

Human authority

Deal, specialist and committee decisions remain human-owned and auditable.

Human-owned hypothesis

Accountable owners must validate cycle time, effort, quality and exceptions against dated evidence before any benefit claim.

Architecture choice

Control is designed into every material boundary

The approved pattern deliberately rejects shortcuts that weaken authority, evidence or environment isolation.

Claims: P6-C010 · P6-C011 · P6-C012

Chosen

Case-centred assistive workflow

Evidence envelope, common policy, grounded analysis and explicit review gates.

Rejected

Autonomous decision agent

Conflicts with retained investment authority and prohibited-action controls.

Rejected

Source write-back

Weakens authoritative-system boundaries and source integrity.

Rejected

UI-only governance

Does not enforce policy consistently at admission, analysis and transfer boundaries.

Trade-off: stronger evidence, isolation and human control in exchange for more gates, identities, operating complexity and release latency.

TOGAF target

Governed evidence flows to a draft — authority stays human

Approved vendor-neutral application view: 19 Architecture Building Blocks and 10 architecture decisions.

Claims: P6-C013 · P6-C014 · P6-C015

Policy and audit span the flow; the committee hand-off is explicitly non-automated.

Private landing-zone integration with an isolated assurance boundary

The approved design separates platform, non-production, production and Internal Audit concerns; exact target values remain fail closed.

Claims: P6-C016 · P6-C017 · P6-C018

Security Private paths, separated identities and isolated assurance.

Reliability Zonal primary and warm recovery design intent.

Cost Evidence-led sizing; fixed network and recovery capacity remain material.

Performance Separate interactive and document-pack paths; caps await benchmarks.

Operations Fail-closed activation, diagnostics and independent release chain.

The package is built and locally validated — the target is not

Approved sequence: 17 deployable units, five work packages and 46 acyclic dependencies.

Claims: P6-C019 · P6-C020 · P6-C021 · P6-C022

116

deployable source files

Bound across all 17 implementation units.

10/10

local validation steps

Retained run reported PASS.

55/55

laC tests

Reported by final assurance evidence.

77/77

application tests

Reported by final assurance evidence.

Readiness boundary

No Azure sign-in, target validation, what-if, deployment, retention finalisation, cloud validation or runtime testing occurred.

No approved numeric case exists — owner inputs come first

Costs, benefits, assumptions and sensitivities must be grounded in dated owner-approved sources; no placeholder numbers are presented.

Claims: P6-C023 · P6-C024 · P6-C025

Financial evidence boundary

No approved ROI, Azure price, rate, cost total or realised benefit exists.

FinOps + Enterprise Platform + CIO

Dated Azure Pricing Calculator estimate after exact region, capacity, usage and resilience inputs.

CIO + Deal Operations

Dated baseline and post-adoption cycle-time, effort and throughput evidence.

AI Governance + Legal + Compliance

Dated quality, exception, review and unsupported-claim evidence.

Procurement / commercial owner

Subscription terms, discounts, licences, currency and tax assumptions.

Principal sensitivities: regional selection, resilience posture, document volume, model quota, processing hours, support model, licensing and adoption.

Open boundaries remain explicit, unwaived and fail closed

The residual position is intentionally visible so endorsement cannot be mistaken for closure or operating effectiveness.

Claims: P6-C026 · P6-C027 · P6-C028 · P6-C029

3

Authority conflicts

Verdict issuance; analysis execution; audit evidence export.

14

Owner-bound controls

VAL-001-005; AFFB-RES-001-002; CC1-OWN-001-007.

2

Retained AFF-B minors

AFFB-CC001-R2-MIN-001; AFFB-CC001-R3-MIN-002.

Owner evidence still required

Legal applicability and mappings, approved locations, operating definitions, source inventory, assurance identities, release custody and trust evidence.

Future authorisation still required

Retention finalisation, target validation, deployment, runtime testing and operating-effectiveness assessment.

Assurance boundary

Coverage is architecture assurance — not legal advice, certification, attestation, waiver or approval.

Recommendation

Endorse the controlled baseline and evidence-led roadmap

Keep optional deployment and runtime testing as separate, human-invocable decisions after owner evidence and authorised validation planning.

Claims: P6-C030 · P6-C031 · P6-C032

01

Endorse baseline

Accept the approved architecture and coding evidence as the controlled reference.

02

Close owner evidence

Resolve the fourteen controls and preserve the three blocked authority interfaces.

03

Plan authorised target validation

Define scope, safeguards and evidence before any optional deployment decision.

Board ask

Endorse the approved architecture and coding baseline, and sponsor the controlled roadmap. Do not approve deployment.

Phases 7 and 8 remain optional, separate, human-invocable and unauthorised.
